

Application Tools

Jack Termination Hand Tool

Application/Product Description

The HellermannTyton HT-TT Termination Tool has been specifically designed to terminate the HellermannTyton range of GST UTP and FTP keystone jacks. The interchangeable colour coded modules mean that a single tool can be used for both UTP and FTP terminations. The single action operation terminates all 8 conductors and crops any excess cable in a single action helping to ensure the quality and consistency of the connections and reducing installation time.

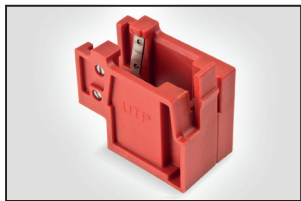

The HT-TT termination tool is manufactured from 30% glass filled nylon and is available with both FTP and UTP modules or with only an FTP or UTP module. The interchangeable modules are colour coded for ease of identification. The blades within each module are manufactured from tool grade stainless steel and will perform in excess of 10,000 terminations.
